Key Business Insights

- Warehouse D handled the highest order volume (116,308 units) and shipment volume (112,192 units), making it the best-performing warehouse in the network.
- Total orders (452,665 units) exceeded total shipments (444,680 units), indicating a fulfillment gap of nearly 8,000 units, which may contribute to stockouts and backorders.
- High, Medium, and Low priority orders contributed almost equally to total order volume, suggesting a balanced distribution of operational workload across priorities.
- Average lead time remained stable at approximately 5 days across all order priorities, indicating consistent supplier and logistics performance.
- Clothing generated the highest order demand (117,828 units), making it the most frequently ordered product category.
- Electronics had the highest average product price (₹510.66) among all categories, contributing significantly to potential revenue generation.
- Electronics also recorded the highest number of stockout incidents (2,278 cases), highlighting inventory planning challenges for high-demand products.
- Stockout counts were relatively high across all product categories, suggesting a need for improved inventory forecasting and replenishment strategies.
- Warehouse D reported the highest number of backorders (2,312 cases), indicating possible inventory shortages or fulfillment bottlenecks.
- Backorder levels were consistently high across all warehouses, revealing opportunities to optimize inventory allocation and supply chain responsiveness.
